WYCOM/Classic checksigners solve your dot matrix check signing problems! How secure are antiquated signature plates and messy rubber stamps? If you are currently using continuous form check stock in a dot matrix printer environment, the **WYCOM/Classic** is the checksigner for you.

The **WYCOM/Classic** is both a check protector and a checksigner. The unit will print graphic dollar prefixes and amounts, and sign checks **AS THEY'RE PRINTED** to your Dot Matrix printer!

Each **WYCOM/Classic** checksigner has two different physical keys (similar to a safety deposit box), and this dual-key locking system provides complete security over all your check signing functions. With built-in signature suppression, signing can be withheld at predetermined dollar amounts. The **WYCOM/Classic** constantly monitors your data and can automatically VOID any overlimit check. The **WYCOM/Classic** is a huge security improvement over rubber stamps, signature plates and continuous form signers!

The **WYCOM/Classic** checksigner is a hardware peripheral and works with your existing software. In addition, the **WYCOM/Classic** has the broadest compatibility on the market and is

Features:

- Exclusively for Dot Matrix printers
- Uses pre-printed check stock
- Eliminates signature plates, rubber stamps and continuous form signers
- Automatically prints and signs checks in a single pass directly off the printer
- Up to 3 signatures per check
- Signature titles and backgrounds available
- Optional protected amount only printing (when you do not want a signature)
- Up to 8 different accounts (e.g., Payroll, Accounts Payable, Share Draft, Purchase Orders, etc.)
- 8 non-resettable counters keep an accurate tally of checks for audit control
- Count signed checks, count voided checks, or count all checks
- 2 (Dual-lock) keys for enhanced security Authorized signature can be "locked out" to prevent unauthorized signing of checks
- Suppresses signatures if over a pre-determined dollar amount
- Adds a forge-resistant protected graphic amount while printing
- Provides amount limits (add signature at amount, suppress signature at amount, VOID at amount)
- Offline Continuous Form Signer Mode, with or without keyboard
- Protects against forgery and alteration
- Saves time and offers greater efficiency
- Produces a "manual check" without a computer in the event your computer system goes down.

Compatibility:

- No computer hardware or software changes required
- Works with nearly all dot matrix printers
- Supported emulations include: Epson FX, Epson LQ, IBM Proprinter, Okidata Microline, DEC
- Serial RS-232 interface
- Parallel interface
- Can operate without a computer by using a

compatible with nearly all Dot Matrix printers. This means that no expensive software changes are required!

Wycom products have proven reliable and robust in thousands of installations. For more information contact Wycom at 1-800-869-0236 or [Contact Us](#).

keyboard

- Note: Not upgradeable to laser printing, laser MICR printing or dot matrix to laser conversion
